

Dear Editor-in-Chief

of Concurrency and competition: Practice and Experience Journal

It is my pleasure to submit my paper titled "Quantum Inspired Genetic Algorithm for Home Health Care Team Routing", to be reviewed and published in Concurrency and competition: Practice and Experience Journal.

I think that Concurrency and competition: Practice and Experience Journal is one of the best journals that can incarnate my paper because this paper is well aligned with its main goals of this journal by containing a powerful hybridization of some known new soft computation tools : quantum computing and genetic algorithm.

The soft computing approach proposed in this research paper takes advantage from the hybridization of two soft computing known techniques: First, quantum computing extends computer capacity to more than what was traditionally and for long time known as strict frontiers of storage capacity and process computing ability. Second genetic algorithm demonstrated a high performance computation when dealing with optimization.

Furthermore, this proposed paper fits Concurrency and competition: Practice and Experience Journal objectives of applicability by applying this powerful soft computing approach to solve an example of NP-hard combinatorial optimization problem: Home Health Care Scheduling. It can be considered as a good application of theoretical soft computing concepts.

Finally, I think that what I have presented in this paper is not the best or the strongest to be not discussed or rejected, but I believe in the performance of your review process and I consider it as good support to improve author contributions and not a strict judgement procedure to accept or reject it.

Yours Sincerely

Dr Montaceur Zaghdoud, Ph.D.
